

Apple Intelligence brings a bunch of AI capabilities to your Apple devices. Sadly, not everyone can access it right now; Apple has only released the feature in certain regions with support for selected languages.

So, what if you want to access it in the unsupported regions? I will show you a workaround that lets you use Apple Intelligence even in those regions.

What is Apple Intelligence?

For those unaware, Apple Intelligence is Apple's answer to the device-integrated AI features. It is built into your iPhone, iPad, and Mac devices and makes them AI-capable by adding generative AI features like writing tools, image creation, photo clean-up, and many more. Check out our article to learn all the [top features of Apple Intelligence](#). These features can improve your user experience and even boost your productivity when used correctly.

Prerequisites for Apple Intelligence

Apple Intelligence is only available on selected devices, languages, and regions. Below is a detailed breakdown of the several prerequisites you must meet to get Apple Intelligence features on your devices.

Supported devices

Apple Intelligence is currently available on the following Apple devices:

| iPhone | iPad | Mac |
|-------------------|-------------------------|-------------------------------|
| iPhone 16 Pro Max | iPad Pro (M1 and later) | MacBook Air (M1 and later) |
| iPhone 16 Pro | iPad Air (M1 and later) | MacBook Pro (M1 and later) |
| iPhone 16 Plus | iPad Mini (A17 Pro) | iMac (M1 and later) |
| iPhone 16 | | Mac mini (M1 and later) |
| iPhone 15 Pro Max | | Mac Studio (M1 Max and later) |
| iPhone 15 Pro | | Mac Pro (M2 Ultra) |

List of Apple devices that support Apple Intelligence

Supported languages

Here are all the languages that support Apple Intelligence:

- English (US)
- English (UK)
- English (Australia)
- English (Canada)
- English (Ireland)

- English (New Zealand)
- English (South Africa)

Supported regions

You can currently use Apple Intelligence in these regions:

- Australia
- Canada
- New Zealand
- South Africa
- United Kingdom
- United States

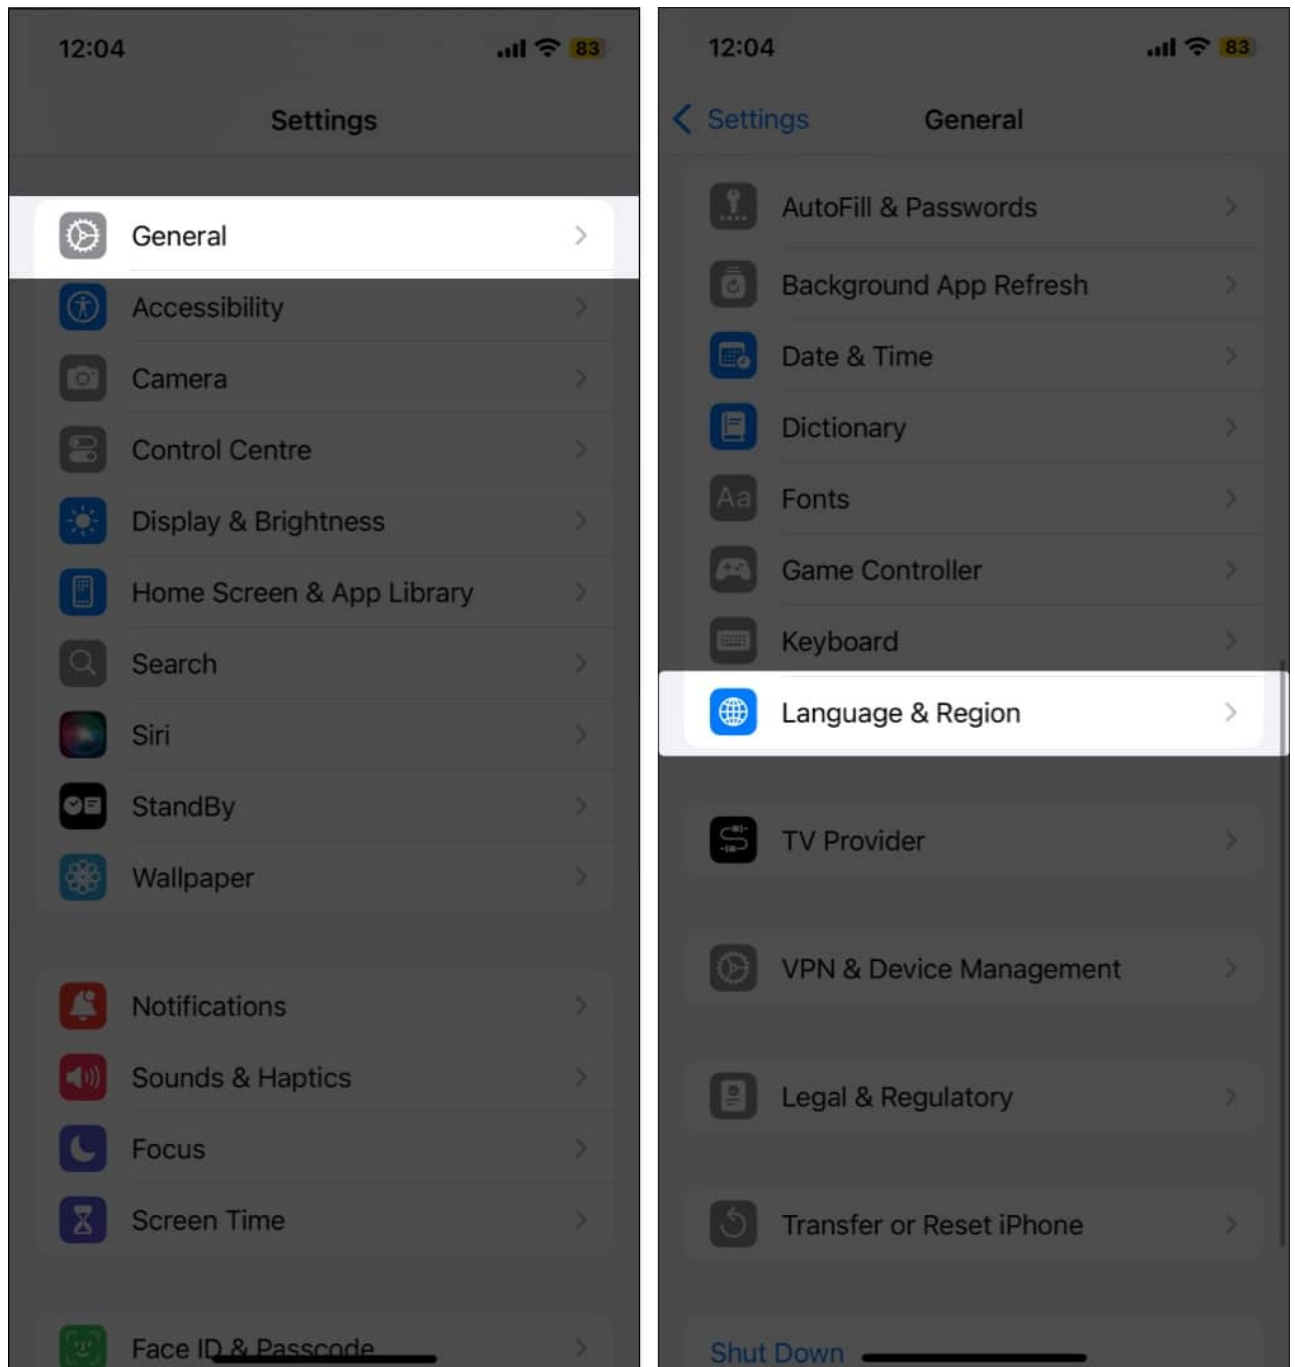

How to enable Apple Intelligence outside the USA

With a few easy steps, you can get access to Apple Intelligence from outside the US. Before we start, you must know that your device should have at least **7GB of free storage space** for Apple Intelligence to work.

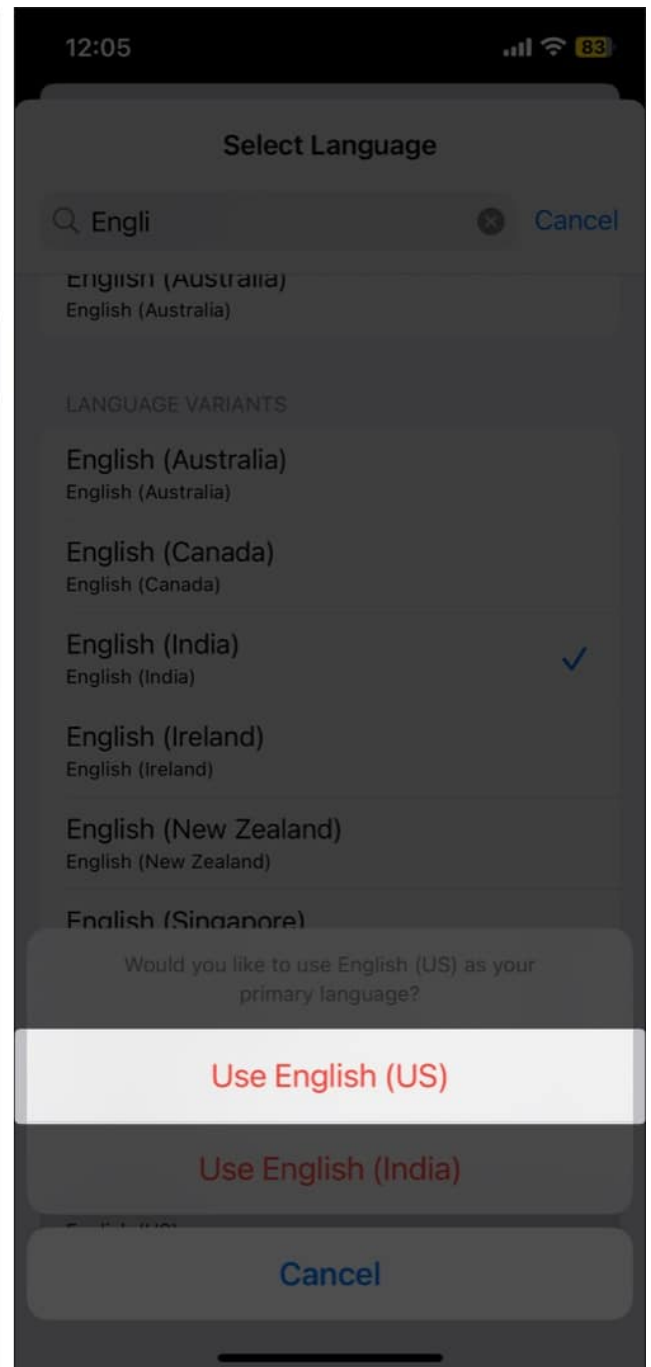

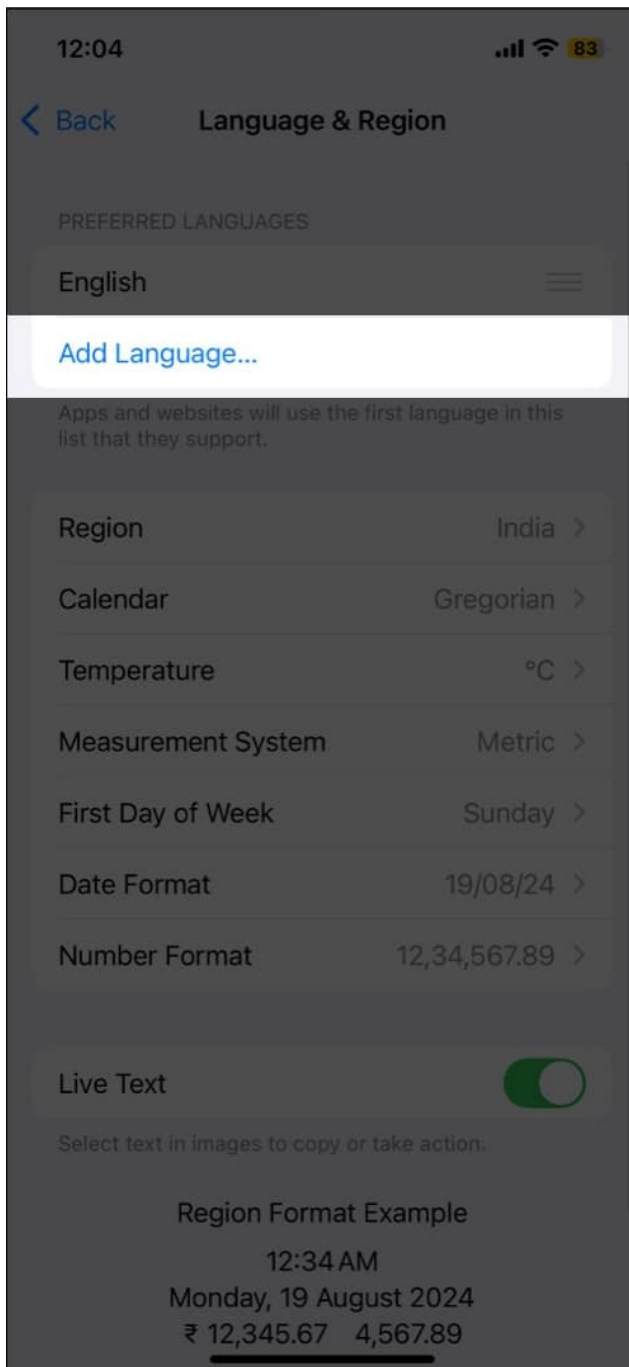

On iPhone and iPad

To enable Apple Intelligence on your iPhone and iPad, update your device software, as Apple Intelligence is available starting with iOS and iPadOS 18.1. Once done, use these steps to change the language and region:

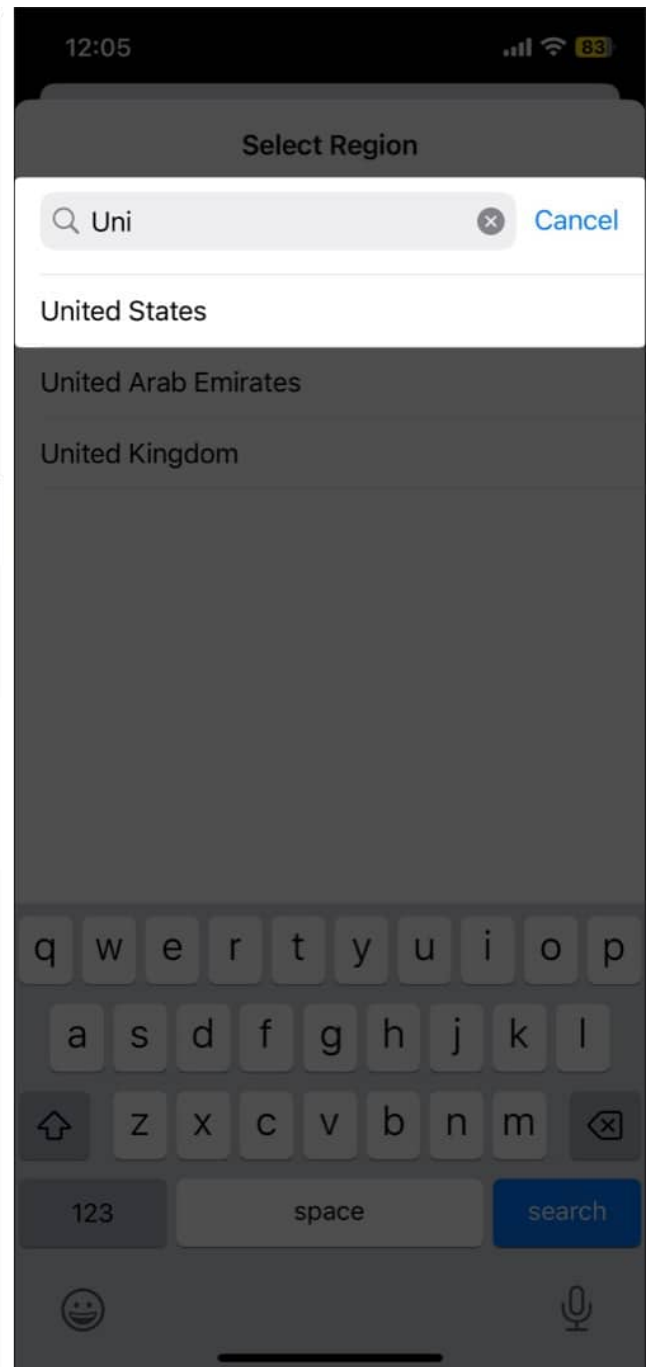

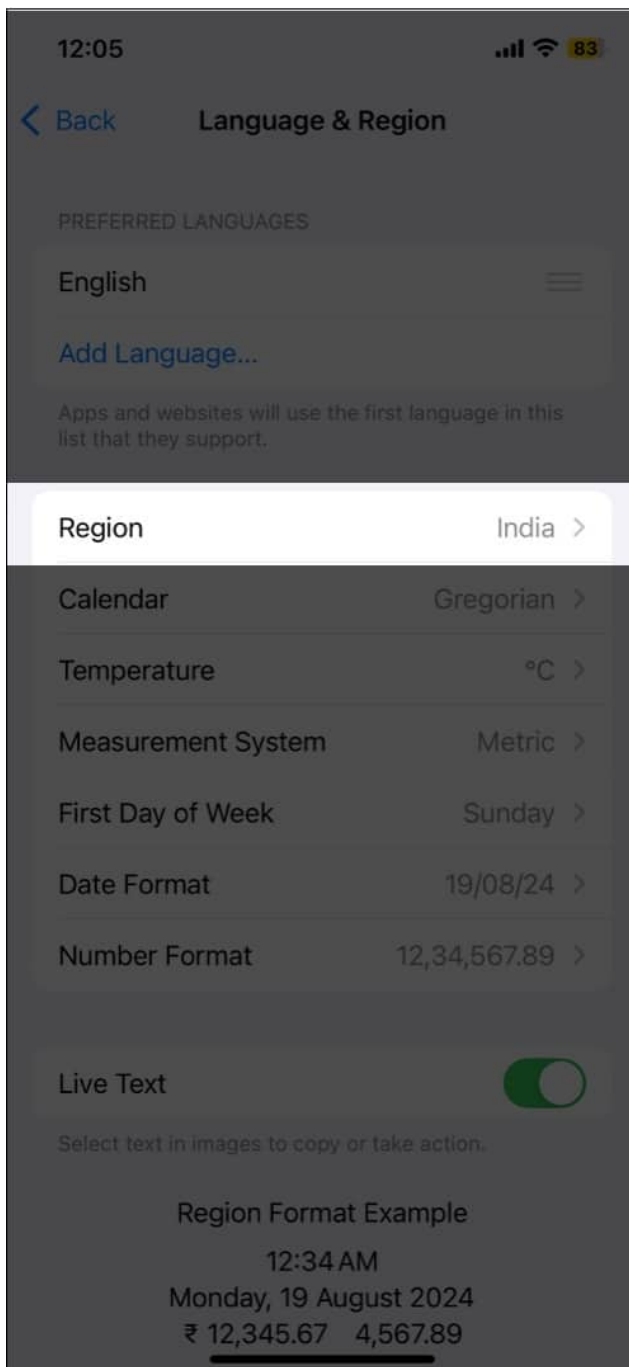

1. Open **Settings** and select **General**.
2. Scroll down and tap **Language & Region**.
3. Under **Preferred Languages**, tap **Add Language**.

4. Now, tap and add one of the Apple Intelligence supported languages like **English (US)**.
5. You will now see a pop-up asking you to switch your primary language. Tap **Use English (US)**.

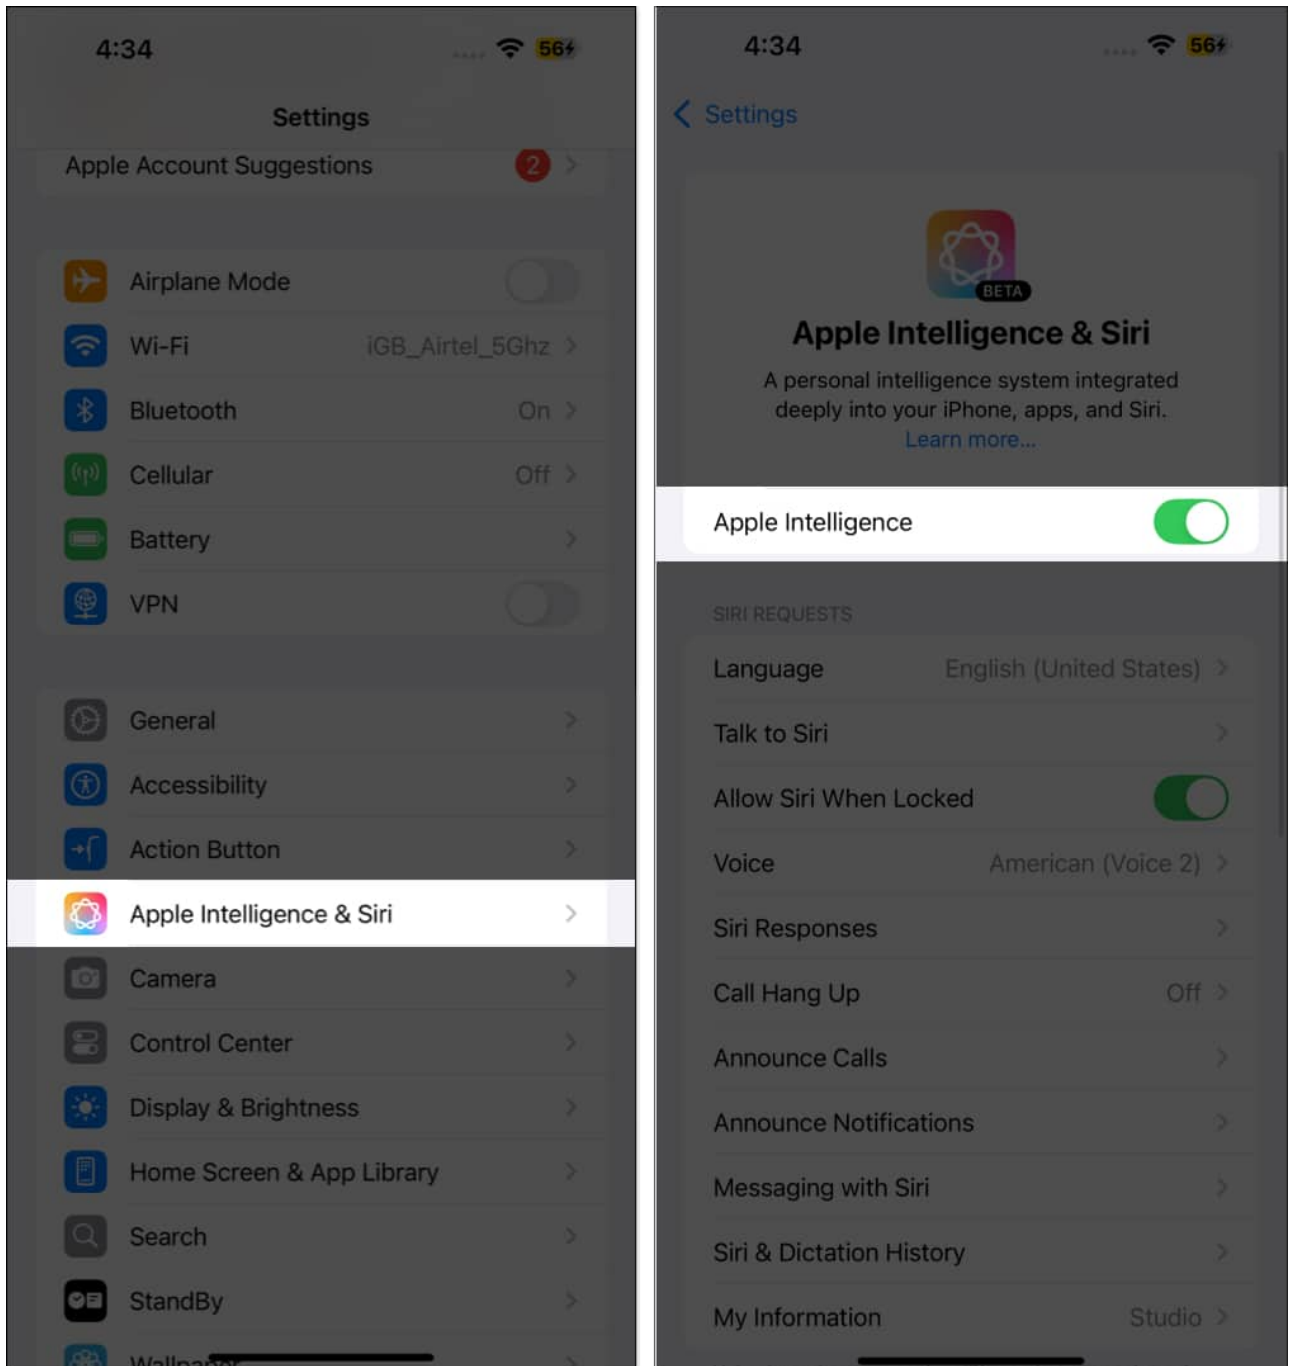

- Now, go back to the **Language & Region** page and tap **Region**.
- Select one of the Apple Intelligence supported regions like the **United States**.

8. You will get another pop-up informing you that applying this setting will restart your phone. Tap **Change to the United States** and wait for your iPhone or iPad to restart. (If it doesn't, restart manually).
9. After the restart, go back to **Settings** and tap **Apple Intelligence & Siri**.
10. Ensure your iPhone and Siri languages are the same. If not, tap **Language** and set it to the same language.

11. You will see a toggle to enable Apple Intelligence. Toggle it on.

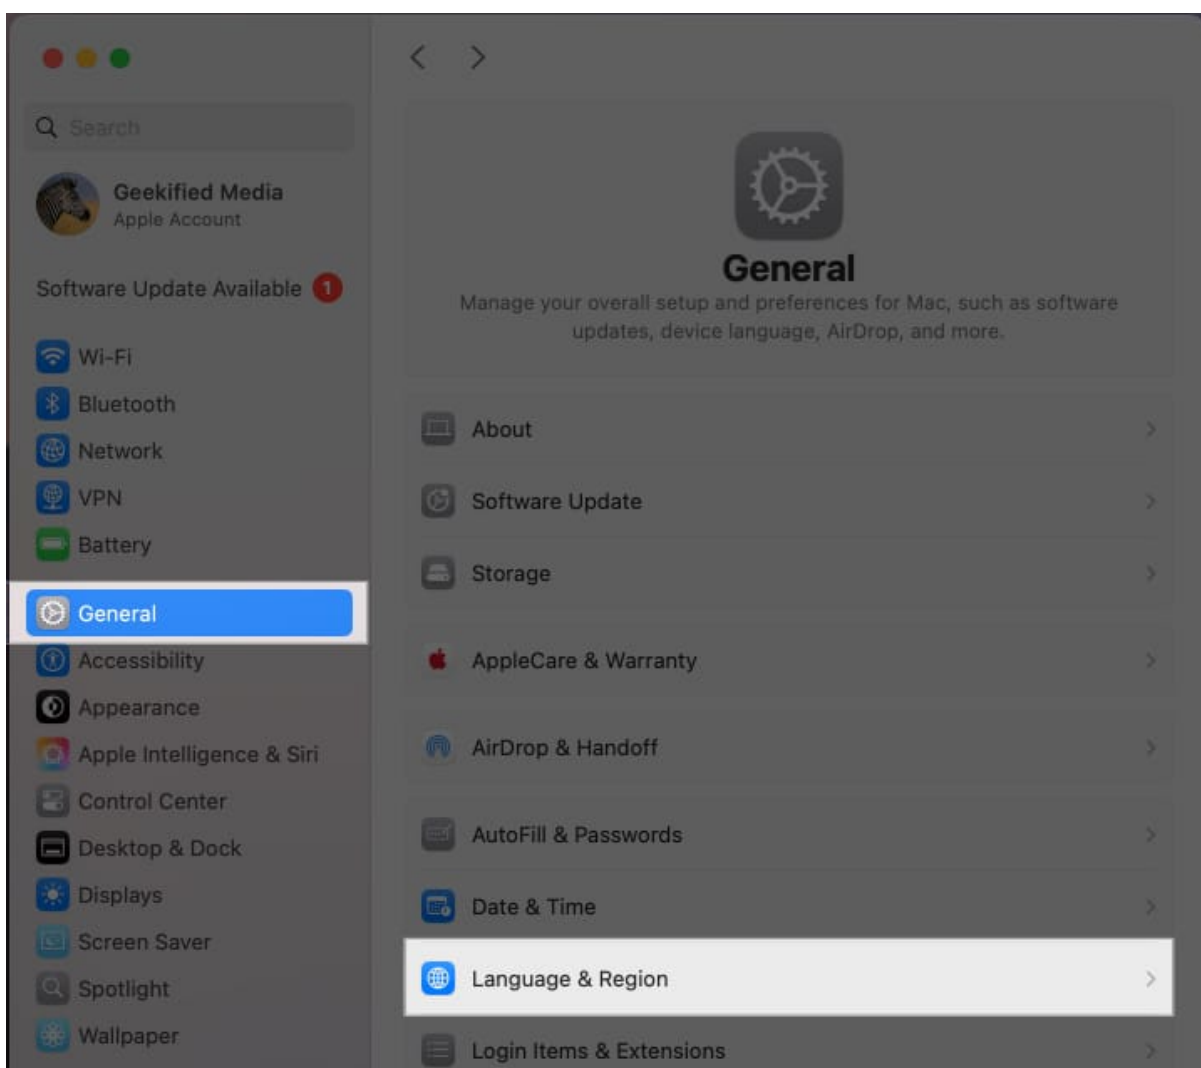

With Apple Intelligence enabled, you are ready to explore all the Apple Intelligence features on your iPhone or iPad.

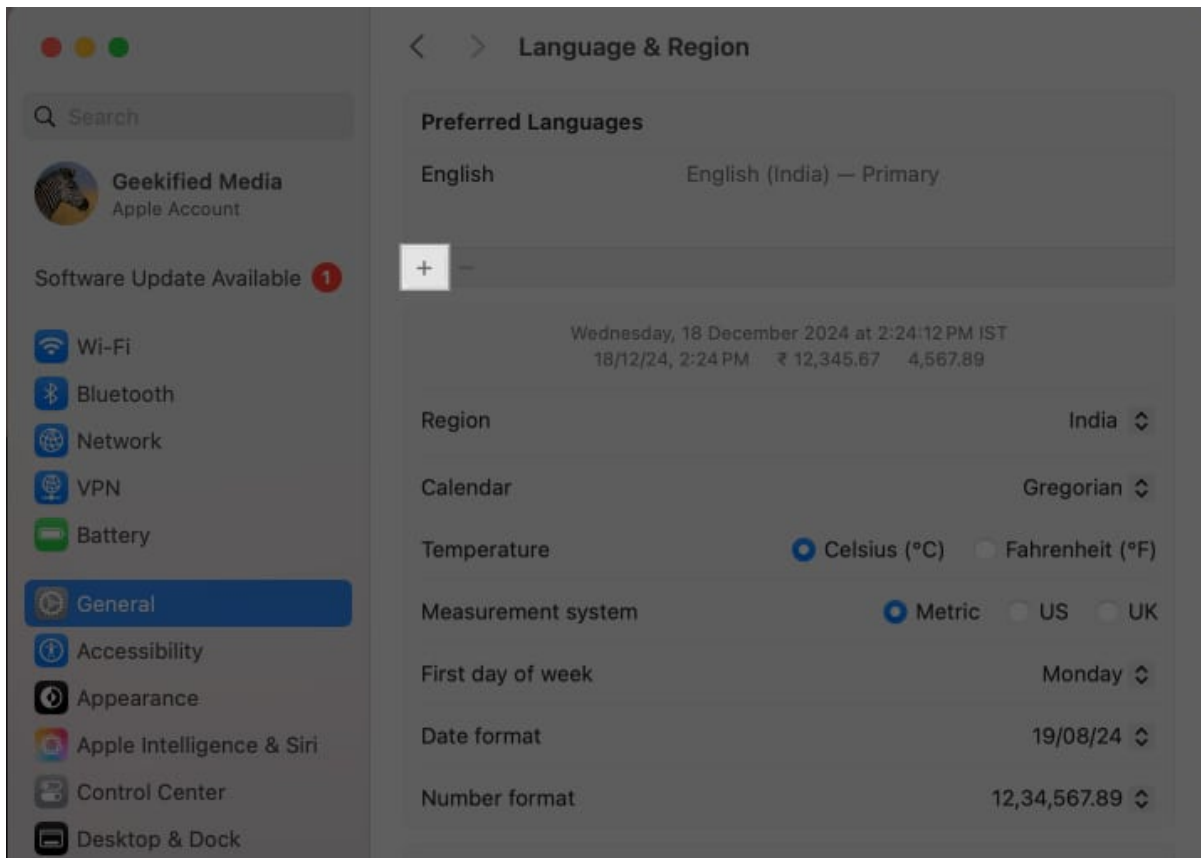

On Mac

Ensure you have the latest macOS running on your computer, as Apple Intelligence is only available on macOS Sequoia 15.1 and later. Then, change its language and region settings like this:

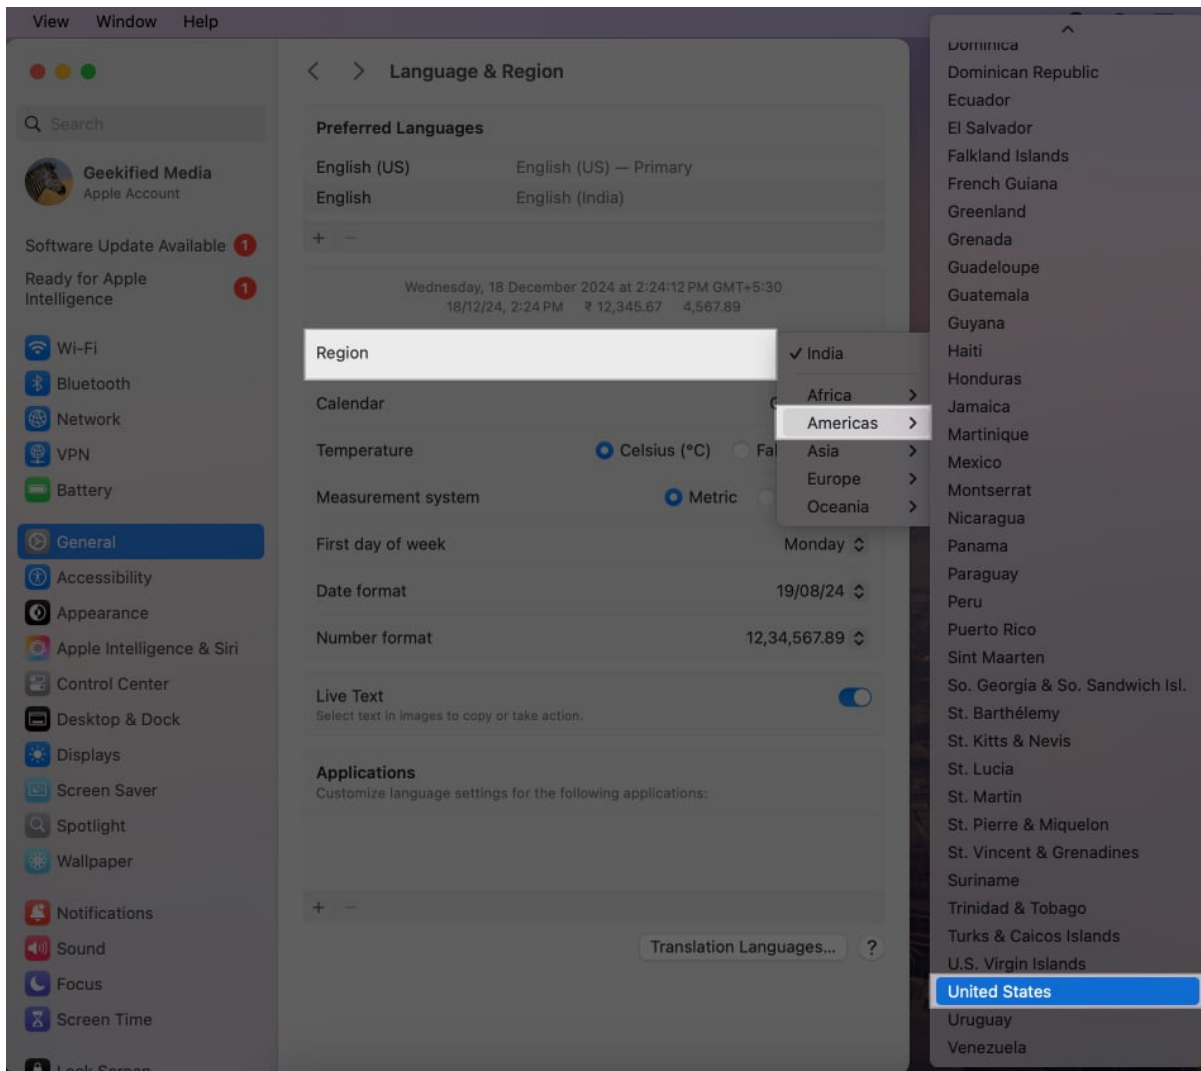

1. Launch **System Settings** and go to **General > Language & Region**.

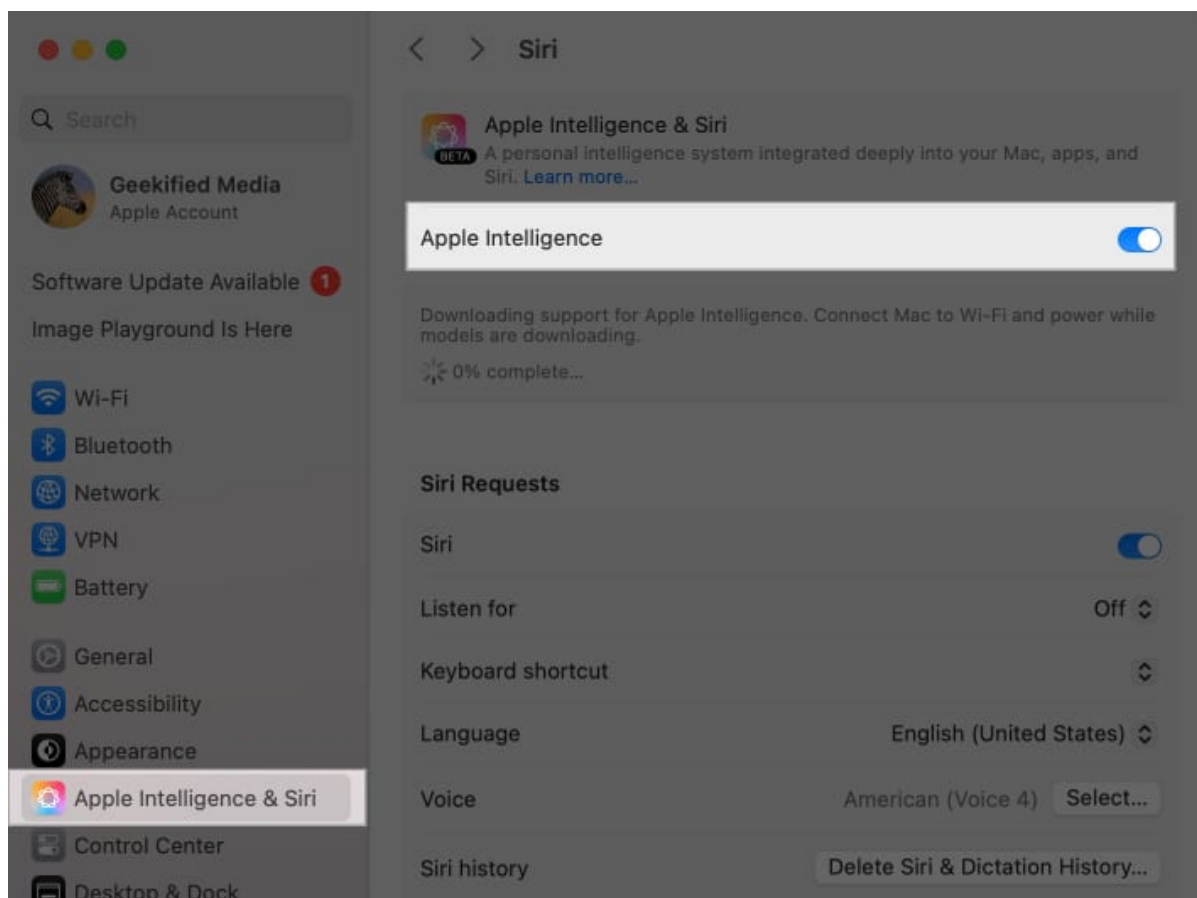

2. Under **Preferred Languages**, click the **+** icon and add one of the Apple Intelligence supported languages like **English (US)**.

3. Now, click **Region** and set it to one of the Apple Intelligence-supported regions.

4. Then, restart your Mac.
5. After it restarts, go back to **System Settings > Apple Intelligence & Siri**.
6. Finally, toggle on **Apple Intelligence**.

It will take some time for your Mac to download support for Apple Intelligence. Once it does, you can start using Apple Intelligence on your Mac.

Note

This workaround may not work if you live in the EU regions or Mainland China. [Apple says](#) it will roll out core Apple Intelligence features to the EU regions by April but hasn't confirmed when they will be available in Mainland China.

Signing off

With Apple Intelligence on your device, you can leverage AI to streamline certain tasks and, in turn, enhance your productivity. Additionally, you can play with other fun little features that come with it. Apple is set to release more Apple Intelligence features in the coming months, so keep an eye out for our site so you get all updates.
