Apart from eating good food and exercising regularly to stay healthy, knowing the SAR (Specific Absorption Rate) value of the iPhone can help you determine whether it can harm you or not. Here, I'll help you understand what SAR value is, how to find the SAR value of your iPhone, and also share tips to reduce the radiation emitted from your iPhone.

What is the SAR value of the iPhone?

There is a high chance of you hearing about the SAR value while <u>buying an iPhone</u> or browsing the internet. Regardless, you may doubt the SAR value of the iPhone. Well, SAR,

short for **Specific Absorption Rate**, measures the amount of radio frequency energy absorbed by the body when using a device.

With this metric, you'll be able to determine the level of radiation emitted by your iPhone. The SAR value is expressed in units of watts per kilogram of body weight (W/kg). Every phone has a different SAR value while obeying the norms set by each government.

The Federal Communications Commission (FCC) sets the maximum SAR limit for mobile phones at 1.6 W/kg in the US. This limit is based on guidelines from the International Commission on Non-Ionizing Radiation Protection (ICNIRP) and is considered safe for public exposure.

Now that you know what SAR value is, let's look at how you can check the SAR value of your iPhone.

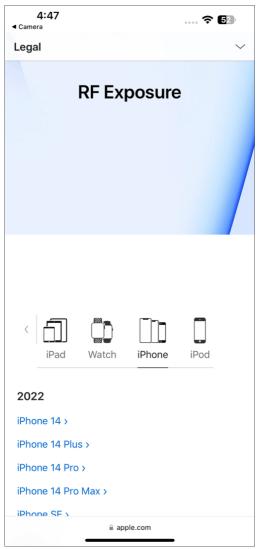

5 Ways to find your iPhone's SAR value

SAR might feel too technical, but in reality, checking your iPhone's SAR is a very simple process. To make things easier, I'll show you five ways to do the same! So, without further ado, let's dive into it.

1. Check the SAR value from the official link

There is an official link to check your iPhone SAR value. All you have to do is:

- 1. Go to Apple's <u>RF exposure page link</u>.
- 2. Choose **iPhone**.
- 3. From here, choose your **iPhone model**.

4. On the next page, you'll get all the information regarding the SAR value of your iPhone.

2. Check the SAR value of the iPhone through a box

Most people prefer to keep their iPhone boxes with them to <u>claim a warranty</u> when needed or for resale purposes.

Whatever the case, if you have your iPhone box, simply rotate the box, and you can see the SAR value behind the iPhone box.

3. Check the iPhone user manual

Apart from the iPhone box, you can also check the manual or documentation inside the box to get more information about your iPhone. However, it might take a bit longer than flipping the box to find it.

reasonably foreseeable loss or damage. You are also entitled to have the goods repaired or replaced if the goods fail to be of acceptable quality and the failure does not amount to a major failure. Apple Pty Ltd, PO Box A2629, Sydney South, NSW 1235. Tel: 133-622.

India Regulatory Information

This device has a SAR value less than 1.2 W/kg (1g), therefore compliant to the max value of 1.6 W/kg(1g) as per DOT office memorandum No. 18-10/2008-IP dated August 17th 2012.

For more info, see: apple.com/in/legal/rfexposure/iphone.html.

RF Exposure Advise:

Organizations such as the World Health Organization and the US Food and Drug Administration have stated that if people are concerned and want to reduce their exposure they could use a hands-free device to keep the phone away from the head and body during phone calls, or reduce the amount of time spent on the phone.

Model Number identification is located in the SIM tray slot.

Indian Language Support:

Conforming to Indian Language IS 16333 (Part 3): 2017 Language Input: English (India) Hindi and Punjabi.

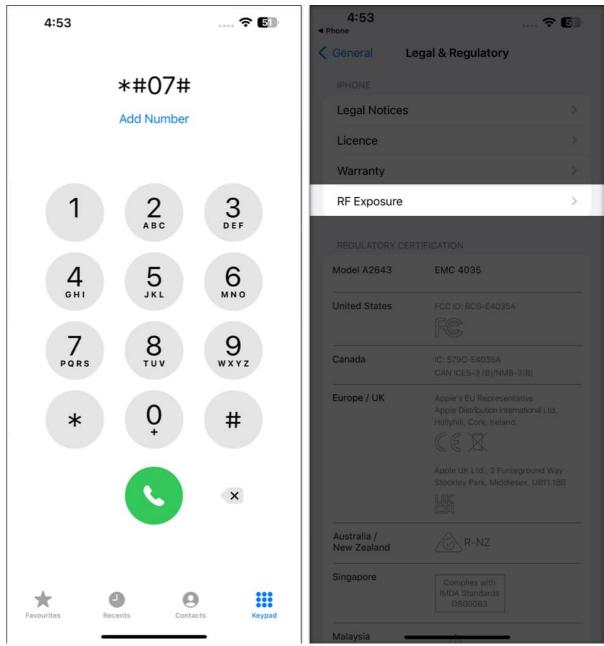

Language Display: Assamese, Bengali, Bodo, Dogri, English (India), Gujarati, Hindi, Kannada, Kashmiri, Konkani, Maithili, Malayalam, Manipuri/Meitei/Meithei, Marathi, Nepali, Odia, Punjabi, Sanskrit, Santali, Sindhi, Tamil, Telugu and Urdu.

Additional Input Languages Supported:

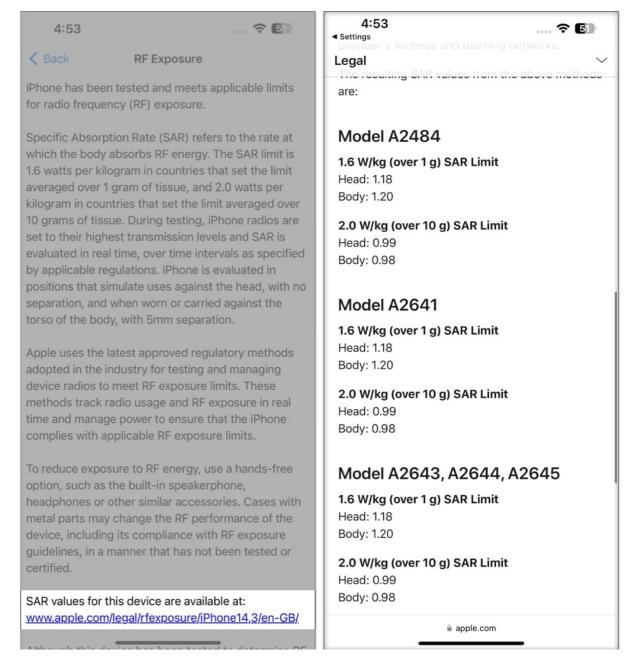

Bangla, Gujarati, Kannada, Malayalam, Marathi, Odia, Tamil, Telugu and Urdu.

4. Use the USSD code to find the SAR value

- 1. Open the **Phone** app.
- 2. Enter *#07# and hit the call button.
- 3. Select **RF Exposure**.

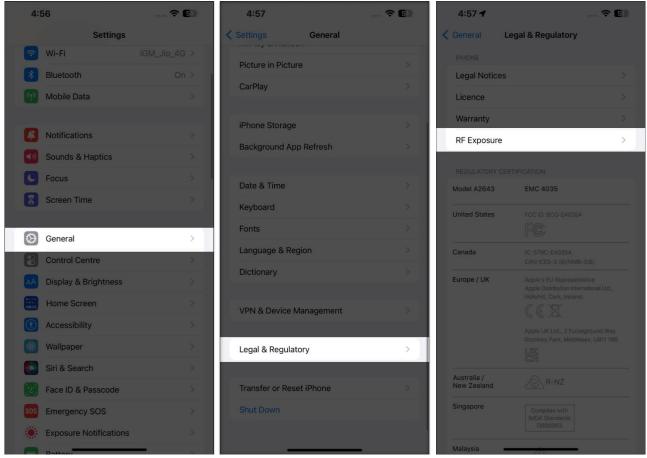

- 4. Tap the SAR value link at the bottom of the page.
- 5. On the new page, scroll down to see the SAR value of your iPhone.

5. Check in iPhone settings

- 1. Open **Settings**.
- 2. Tap **General**.
- 3. Select **Legal & Regulatory**.
- 4. From here, choose **RF Exposure**.

- 5. Tap the link at the bottom of the page.
- 6. Here, you can see the SAR value of your iPhone.

How much SAR value is safe for the head and body?

The ideal SAR value varies depending on the region in which you are living. All manufacturers have to follow the regulations set by the concerned authorities; hence, you can be assured that you are using devices that won't cause any harm.

Why? There hasn't been any scientific proof that radiation from iPhones or smartphones can cause long-term health effects.

Stay safe while using your iPhone

Now that you know about the Specific Absorption Rate (SAR) value and how you can check that on your iPhone, you can take necessary measures to reduce radiation consumption. However, if you still have any doubts or queries, please let us know in the comments.

FAQs

How to reduce iPhone radiation?

To reduce radio emissions during phone calls, use wired headphones, earphones (not Bluetooth ones), or your smartphone's speaker mode. Also, avoid making calls when the signal is weak.
