

Although removing an app from your Mac is simple, it can become quite frustrating when the app doesn't delete from Launchpad or Finder. In this article, I've covered the simplest methods to fix the problem of deleted apps still showing up on Mac. So, let's get started!

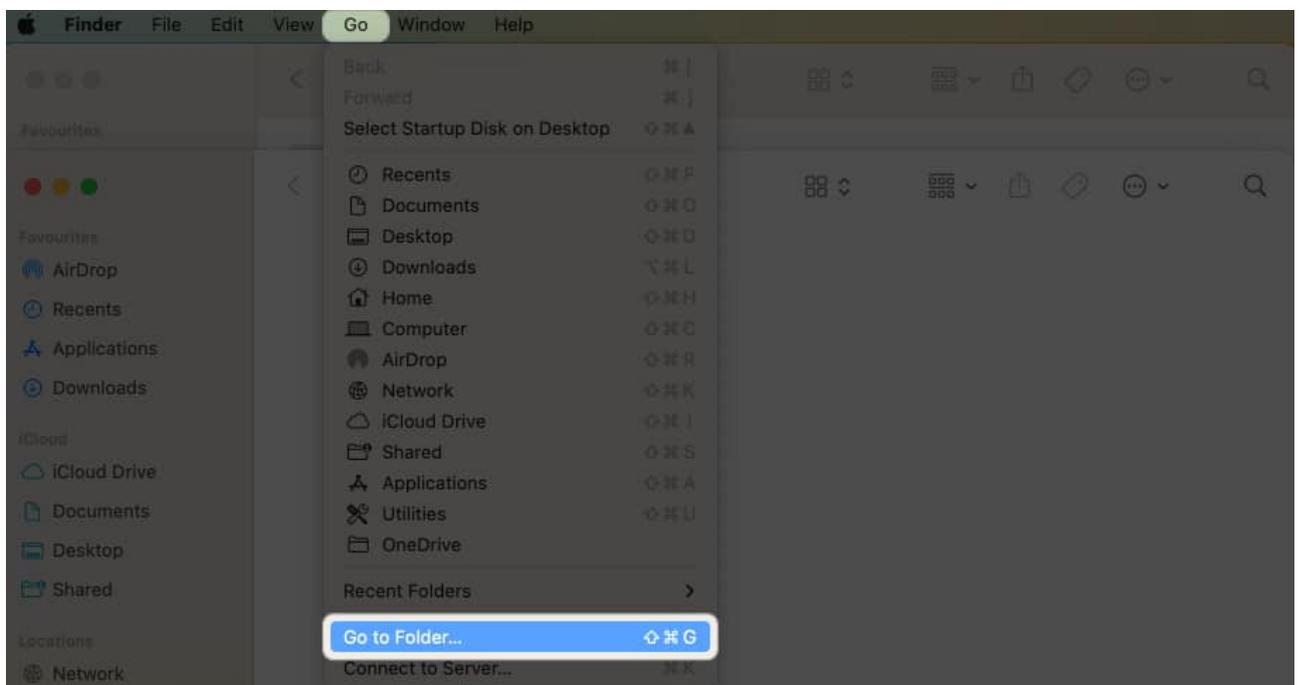

## Table of Contents

1. [Clear Mac cache](#)
2. [Remove app data with Spotlight Search](#)
3. [Uninstall Mac programs from Launchpad](#)
4. [Uninstall app using Finder](#)
5. [Permanently delete an app from Terminal](#)
6. [Force Restart Launchpad using Terminal](#)
7. [Reset Launchpad to delete an already uninstalled app](#)
8. [Boot Mac into Safe Mode](#)
9. [Use third-party app cleaner apps](#)
10. [Other basic fixes](#)

## 1. Clear Mac cache

Your Mac uses a temporary storage location to hold frequently accessed data to speed up its performance. Nevertheless, if you have [uninstalled an application on your Mac](#) but the app icon is stuck in Launchpad, it could be due to cached data linked to that app.

1. Launch **Finder**.
2. Select **Go** from the menu bar → Head to **Go to Folder**.

3. Type **~/Library/Caches** and press **Return**.

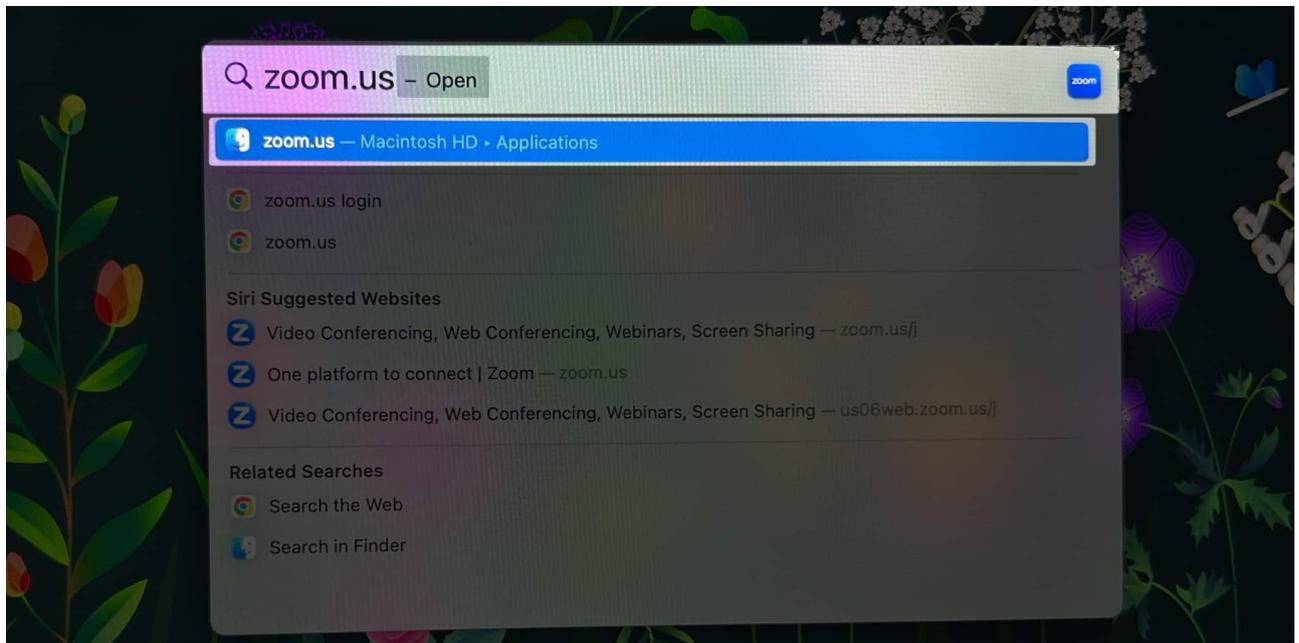

You will be directed to the cache folder. Here you must drag the file or folder containing the deleted **application name** to the **trash icon** in the Dock menu.

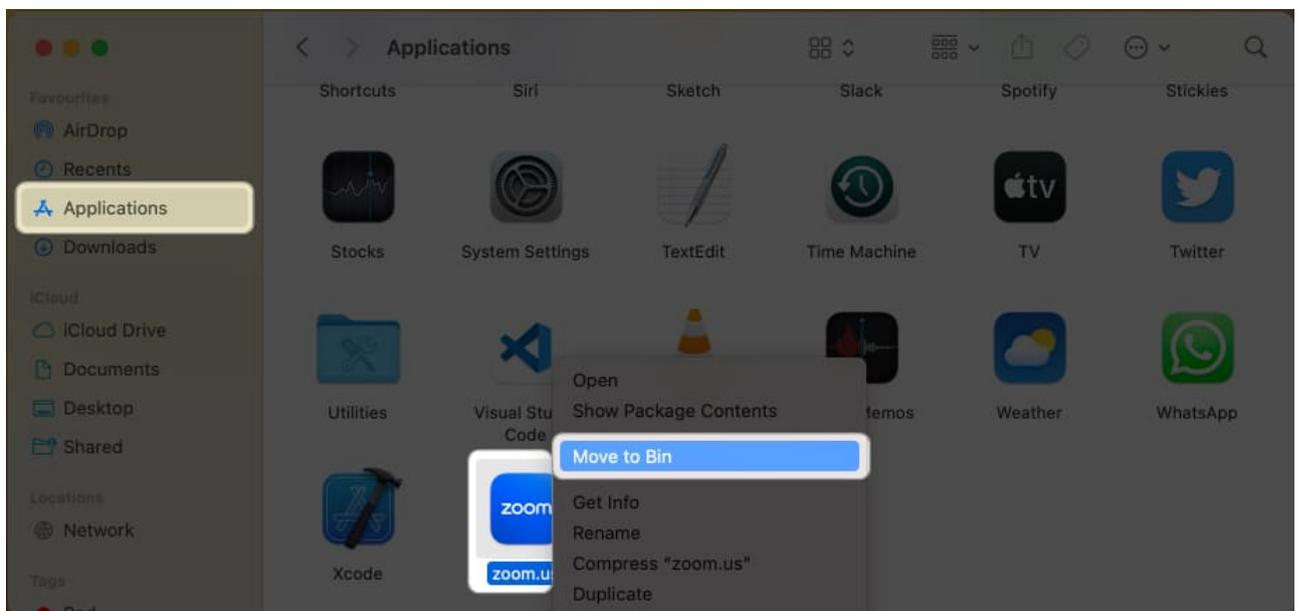

## 2. Remove app data with Spotlight Search

Some third-party software has scripts, support files, self-design drivers, standalone helpers, and app extensions dispersed around your Mac. So, moving the application to Trash leaves its associated files and data on your Mac. You must delete those remaining data to erase all traces of the app.

1. Open **Spotlight Search** by pressing **Command (⌘) + Space Bar**.
2. Type the **app name**.
3. Press and hold the **Command key** to get the exact location of the app.

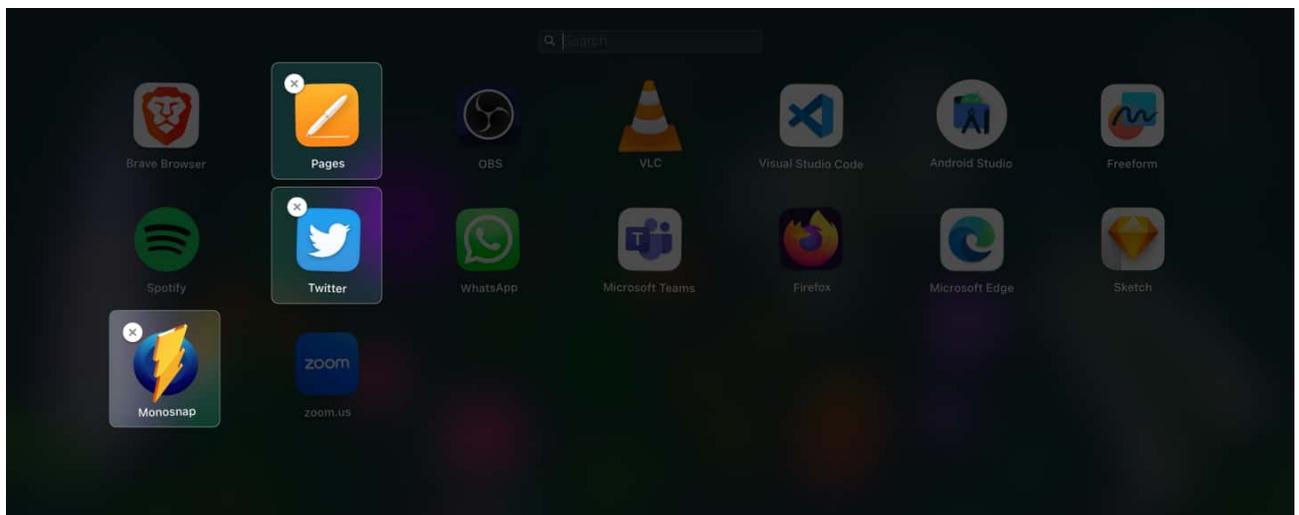

4. Head to that **location** → Right-click on the **app file** → Select **Move to Bin**.

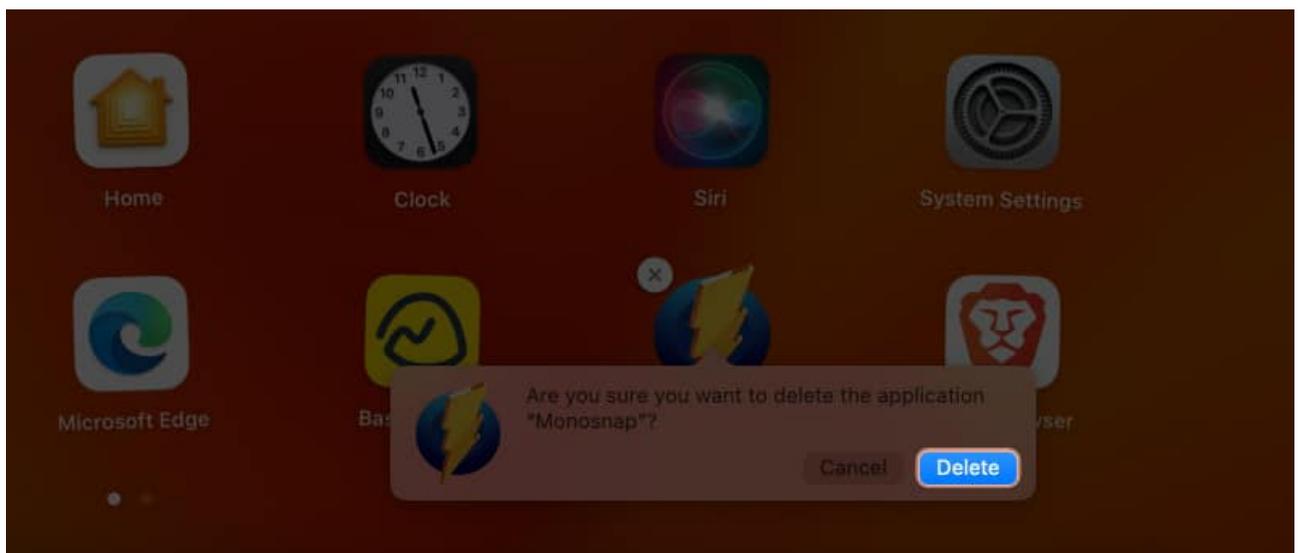

## 3. Uninstall Mac programs from Launchpad

1. Go to **Launchpad** → Find the **app** you want to delete.
2. Click and hold the **app** until it jiggles.

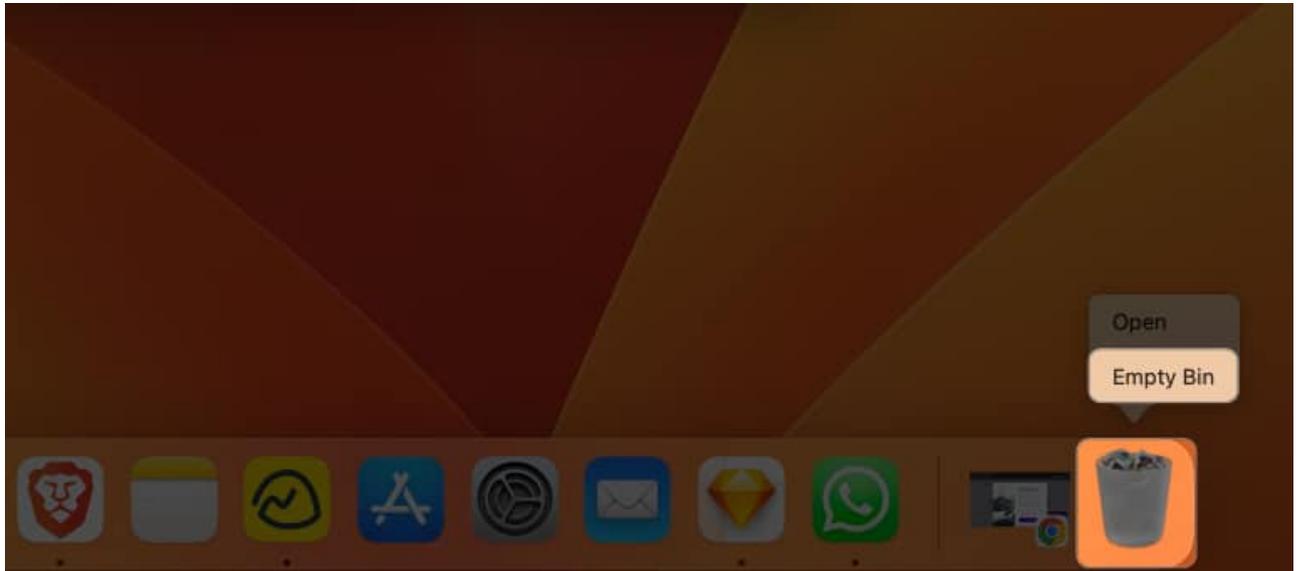

*Alternatively, hold down the **option key** (⌥) on your keyboard until the app jiggles.*

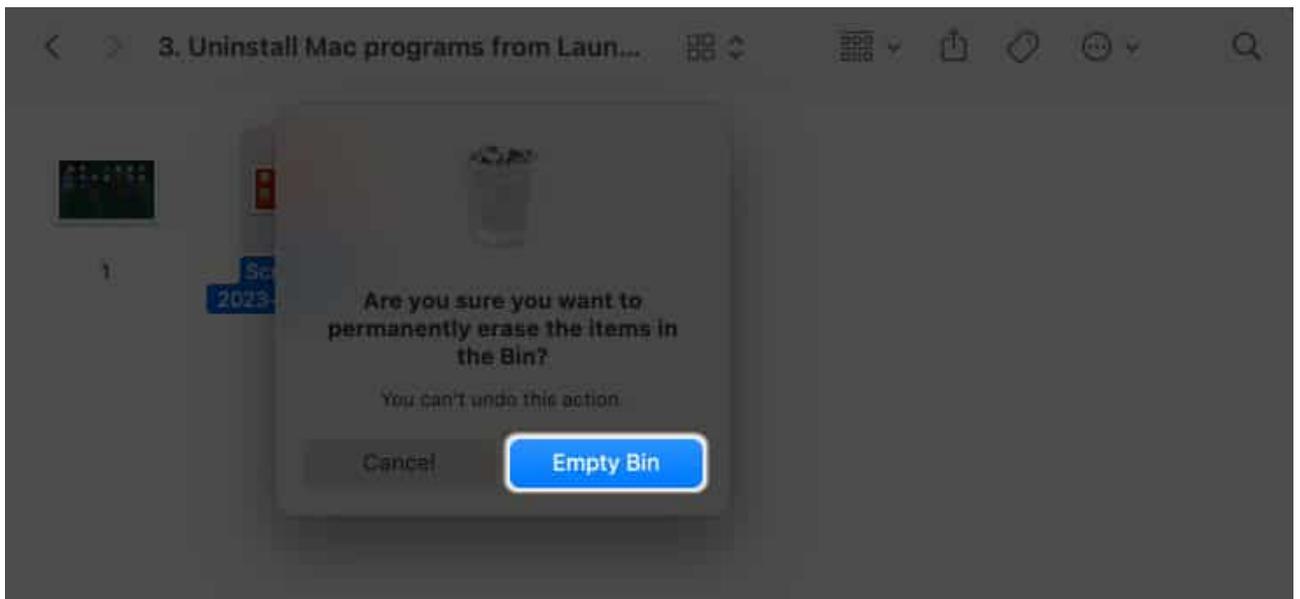

3. Click the **X icon** → Select **Delete**.

4. Right-click on **Bin** on Dock → Select **Empty Bin**.

5. Confirm by selecting **Empty Bin**.

**Note:** This method only allows you to remove programs downloaded from the App Store.

## 4. Uninstall app using Finder

Finder lets you uninstall your third-party apps. So if you can't delete apps from Launchpad, give it a shot!

1. Open **Finder** → Select **Applications** on the left pane.

2. Find the **app** you wish to delete.
3. Right-click the **app** → Select **Move to Bin**.

## 5. Permanently delete an app from Terminal

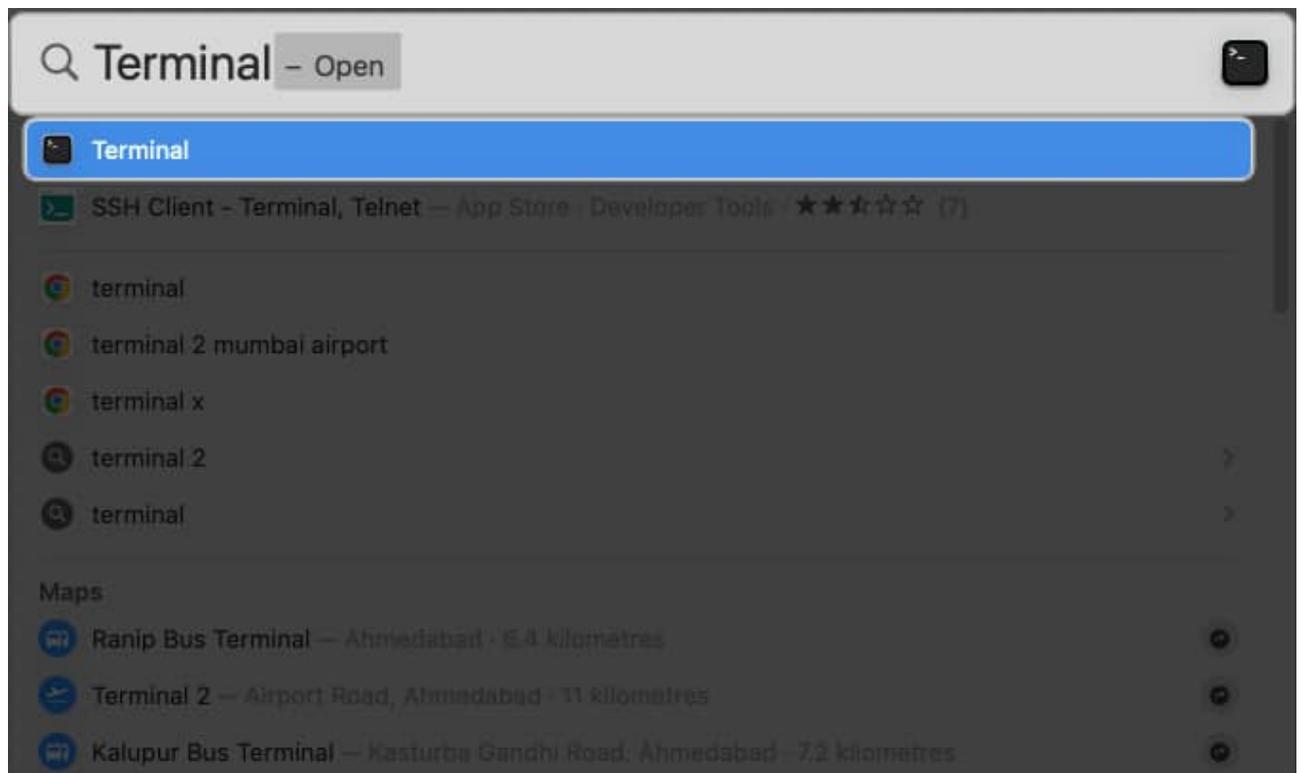

If the app you want to remove is freezing up or stuck while uninstalling, it's best to delete it permanently from the Mac Terminal. It will remove all the app files and related data from the root directory.

1. Open **Spotlight search (Command (⌘) + Space Bar)**.
2. Search and launch **Terminal**.
3. Type **cd /Applications/** → Press **Return**.
4. Type **sudo rm -rf** → Enter a **space** → Drag the **app** from Finder's Application section → Press **Return**.
5. Enter your **Mac's password** → Hit **Return**.

## 6. Force Restart Launchpad using Terminal

The Terminal enables you to perform tasks that may not be achievable normally on macOS. You can force restart Launchpad on your Mac via the Terminal to remove the stuck apps.

1. Launch **Terminal**.

2. Write **killall Dock** → Hit **return**.

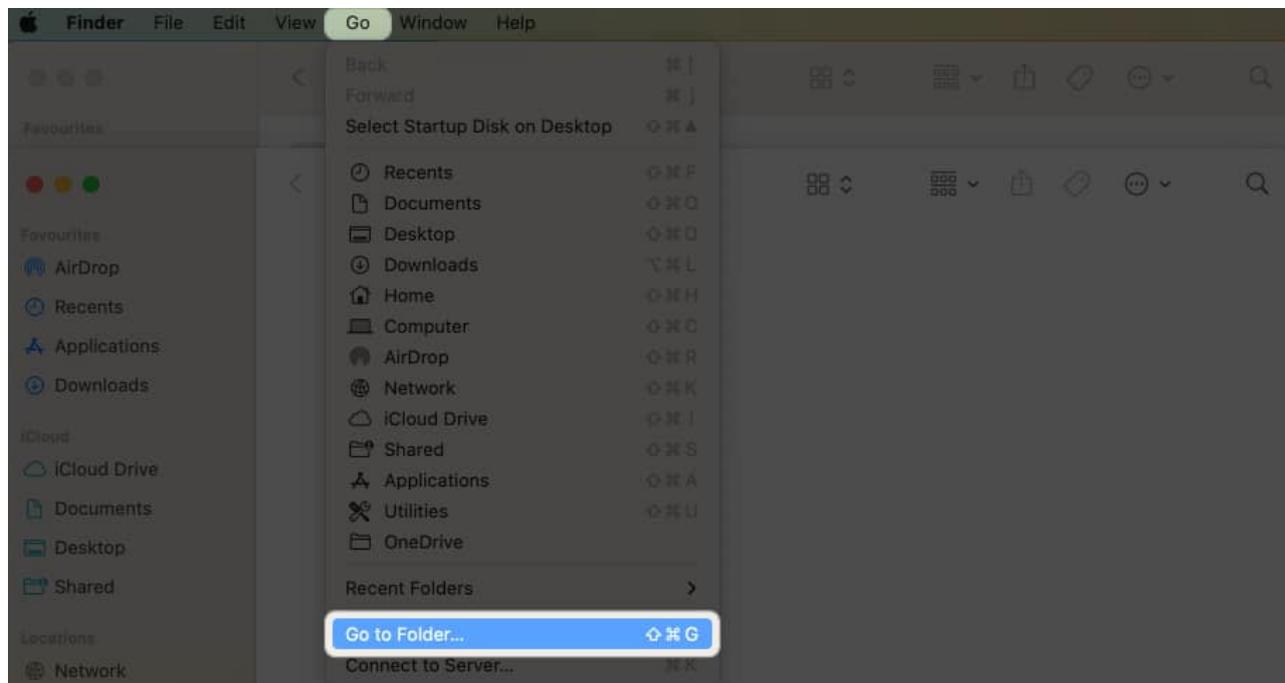

A screenshot of a macOS terminal window. The title bar shows 'igb -- zsh -- 80x24'. The terminal content displays the last login information: 'Last login: Tue Apr 18 12:25:37 on console'. Below that, the prompt 'igb@Bhaskars-Mac ~ %' is followed by the command 'killall Dock' and a cursor. The terminal background is dark gray, and the text is white.

It will restart the Dock and Launchpad, and the app icon will no longer be visible on the Launchpad.

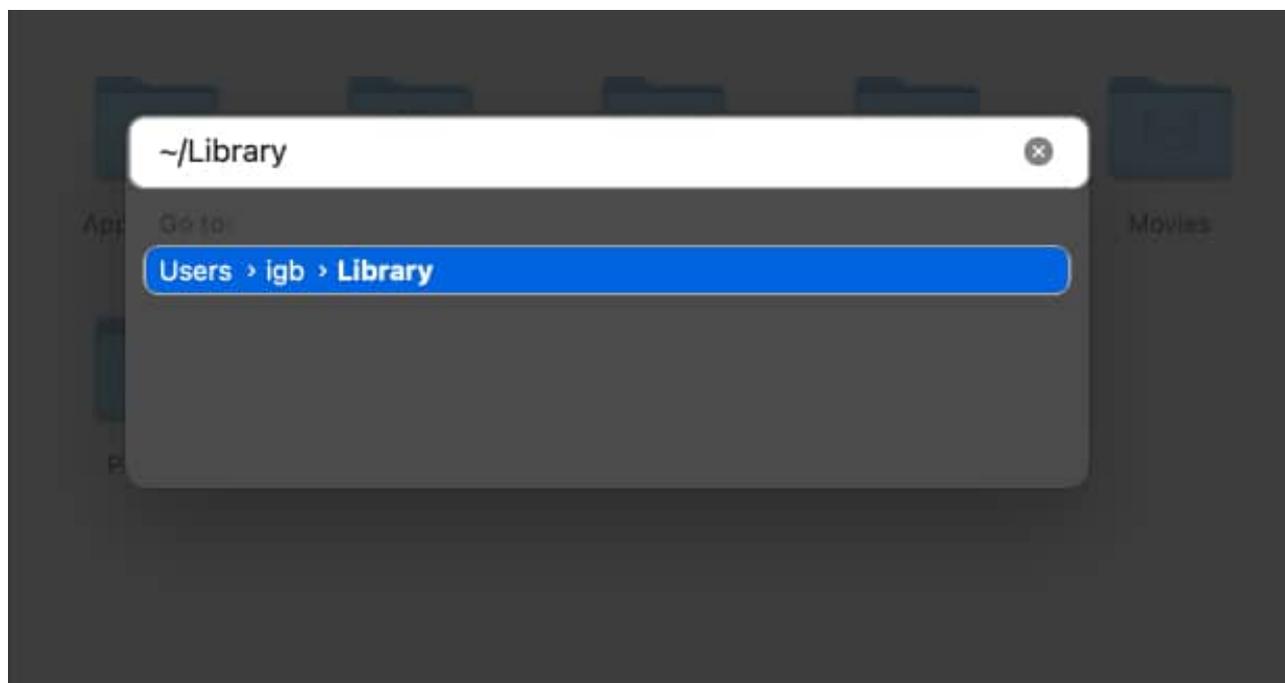

## 7. Reset Launchpad to delete an already uninstalled app

Resetting the Launchpad is a quick and easy way to solve the deleted apps still showing up on your Mac issue. It removes any invalid entries and clears the cache of the Launchpad.

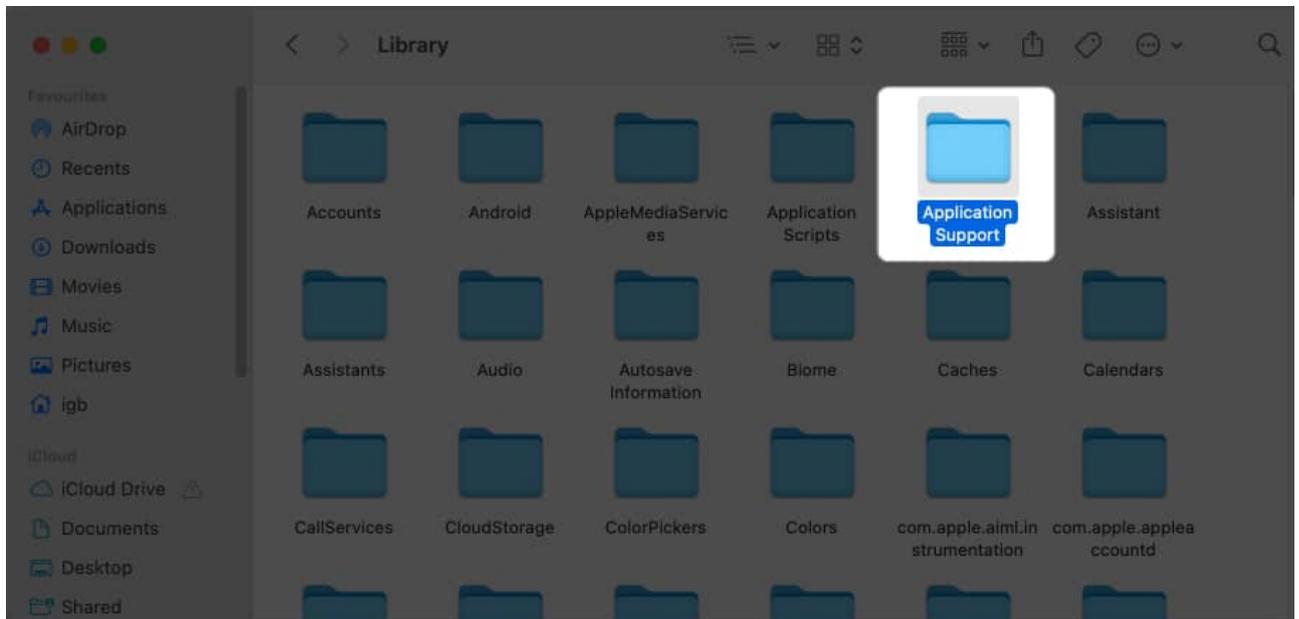

1. Navigate to **Finder** → Choose **Go** from the top → Click **Go to Folder**.

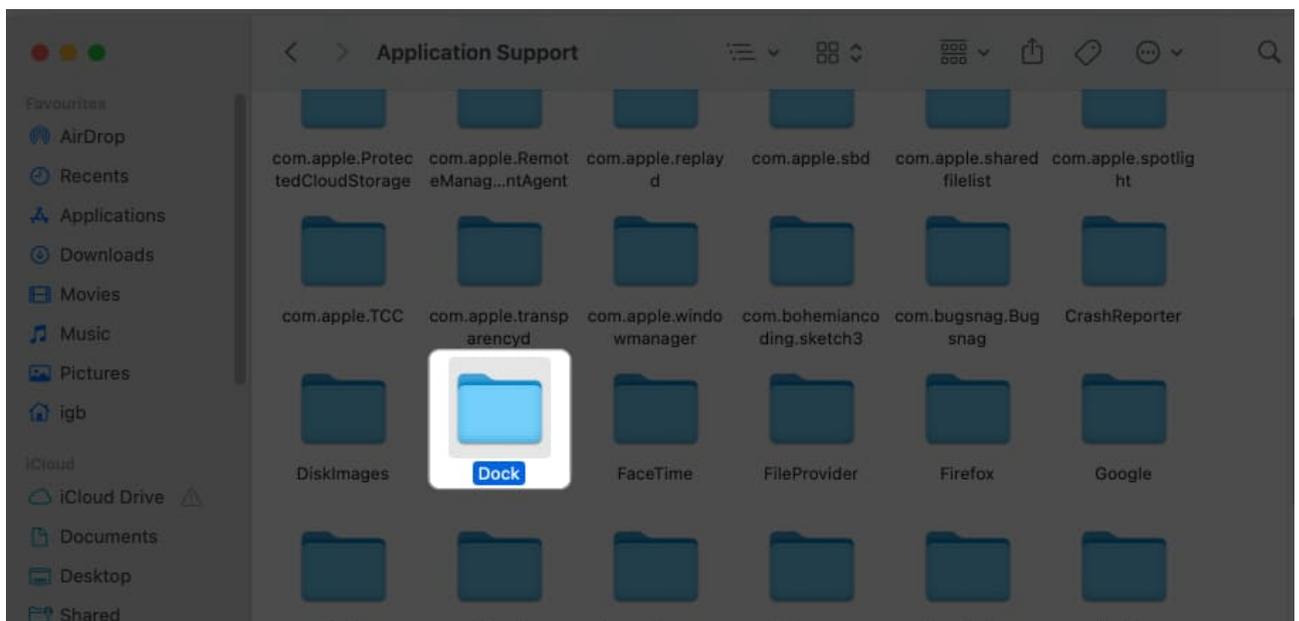

2. Search for **~/Library** → Hit **return**.

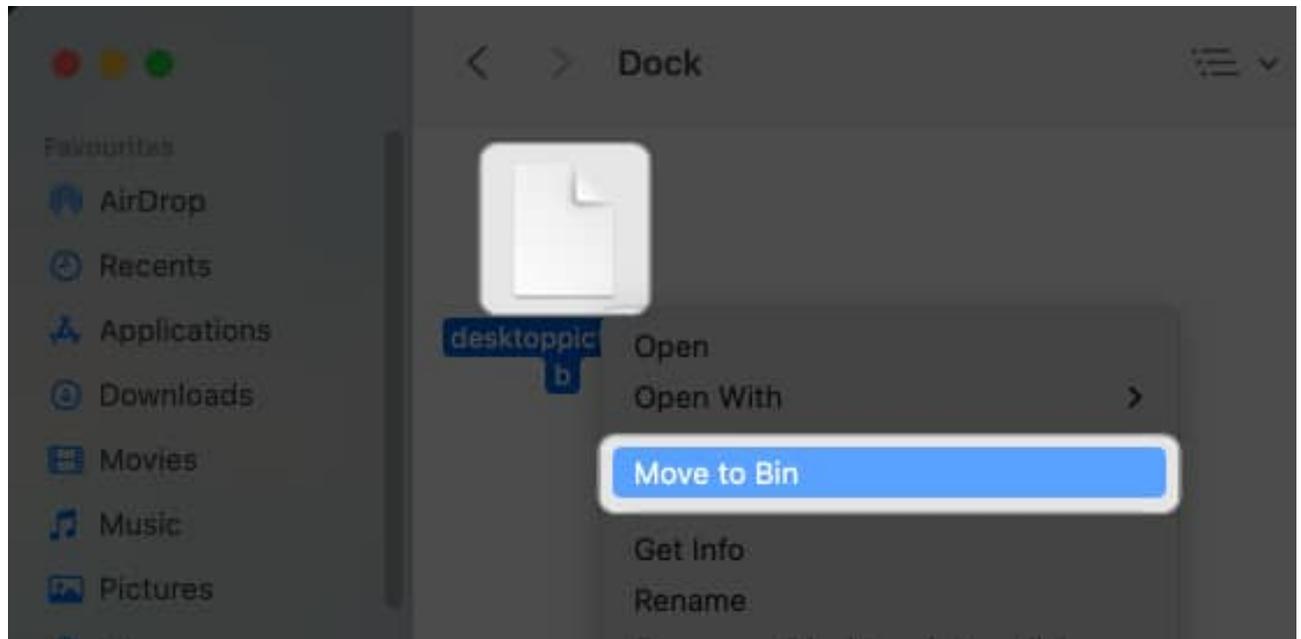

3. Open the **Application Support** folder.

4. Head to the **Dock** folder.

5. Locate files ending with **“.db”** → Right-click and select **Move to Bin**.

## 8. Boot Mac into Safe Mode

Booting your Mac into Safe Mode lets you eliminate any lingering files or settings related to the deleted app. Read our article to find out [how to access Safe Mode on your Mac](#).

## 9. Use third-party app cleaner apps

You can [use a third-party cleaner app](#) to deal with the time-consuming process of manually removing all app data and files.

I highly recommend CleanMyMac X as a reliable choice. To learn more about the software and its features, take a look at our article [CleanMyMac X: All-In-One Software to Clean, Protect, & Speed up your Mac](#).

## 10. Other basic fixes

In case you've attempted the above troubleshooting steps to remove the deleted app icon but have not succeeded, you could try these simple yet effective solutions.

- **Restart Mac:** Although restarting your Mac may seem like a basic fix, it can be a powerful solution to eliminate any glitches. To restart your Mac, click the **Apple logo** () → Select **Shut Down**.

- **Reset Mac:** [Resetting your Mac](#) can fix the deleted app still showing up in your Applications folder or Dock. It eliminates any temporary files or caches that might keep track of the deleted app.
- **Contact Apple Support:** A deleted app from your Mac may still be showing up for a number of reasons, including a bug in the operating system or a problem with the app itself. You can get professional advice and easily fix the aggravating problem by [contacting Apple Support](#).

## Get rid of your deleted app icon!

From manually removing leftover files to using third-party apps, there are several ways I've covered to resolve your issue. So, try the method that works best for your specific situation and ensure your system is running smoothly. ## FAQs

### Why are deleted apps still showing up on Mac?

The persistent leftover app files or an incomplete app uninstallation are two possible reasons why deleted apps continue to appear on Mac.

### What if I can't find any leftover files on Mac?

If you can't find any of the leftover files, then I believe there are none. In that case, I advise you to restart your Mac because it might just be a minor system glitch.

### Will deleting an app on Mac remove any data associated with it?

Normally, the uninstallation process involves erasing all associated files from the device. But on rare occasions, a few related files might hang around even after the app has been deleted.
