 - Using the Audio Converter app

How to extract audio from a video file on your iPhone or iPad

Look at the two simplest ways to extract audio: using an iOS shortcut or a third-party app. I'll guide you through both methods.

1. Using an iOS shortcut

The best way to extract audio from video on iPhone is <u>Shortcuts</u>. Creating a shortcut to convert video to audio may feel daunting, so I suggest installing this <u>audio-extracting</u> <u>shortcut</u>.

- 1. Tapping the **above link** will redirect you to the **Shortcuts** app.
- 2. Select (+) Add Shortcut.

- 3. Now go to the **Photos** app \rightarrow choose the **video** you want to extract the audio from.
- 4. Tap the **Share** button.
- 5. Pull up the Share Sheet and select **Separate Audio**. *It will take some time to extract audio.*

- 6. Go to the **Browse** tab \rightarrow select the **three-dot** icon at the top.
- 7. Tap **New Folder** to create a folder in iCloud drive.

Edit Actions	Recents Shared Browse

- 8. Go inside the new folder and tap **Open**. *The audio file will be saved in the folder.*
- 9. To access the audio clip, open the Files app and then go to the folder you created.

Now, you can rename and share the extracted audio clip. You can also access the Shortcut using Siri's voice commands.

2. Using the Audio Converter app

There are lots of video-to-audio converter apps available on the App Store. You can also use the Documents app to extract the sound clip from the video file.

I am using the simplest option, the <u>Audio Converter app</u>.

- 1. Download the **app** from the App Store.
- 2. Open the app \rightarrow tap the **plus icon**.
- 3. Select Import from Videos. It will ask for permission.

6:57				
			Size	
Guide.mp4				
Import Files				
New Folder				
Import From Videos				
Import From Music Library				
Files/iCound Drive				
Cancel				

- 4. Now choose the video you want \rightarrow tap **Done**.
- 5. Get back to the homepage and tap the **video**.
- 6. Select Extract Audio.
- 7. It will open an editing interface. Tap the **export icon** at the top right.
- 8. Rename the audio file \rightarrow tap **OK**.

9. Now, you can send the audio or upload it to iCloud by tapping the **info icon**.

Remember that third-party apps may have privacy infringements. So, be careful before using any personal videos.

Extract audio seamlessly!

I hope this guide has helped you extract audio from video file on your iPhone. So whether you're a content creator or want to extract the audio from your personal videos, you can do this in just a few simple steps. Then, you may upload the audio file to iCloud and <u>edit the audio on your Mac</u>.
