Burst mode lets you click multiple pictures in quick succession. This helps capture fast events or motion shots. Later you can make a GIF, collage, or sort through the clicks and choose to keep only the best one. Earlier, you had to hold the iPhone camera shutter button to take photos in burst mode. However, on iPhone 11, 11 Pro, and 11 Pro Max, the original method has slightly changed. Now, when you hold the shutter button, it activates QuickTake – which lets you record videos from the Photos tab. As a result, several users wonder how to take burst photos on iPhone 11 series. Well, let me show you two ways to do this!

- How to Take Burst Photos on iPhone 11 or 11 Pro
- How to Use Burst Mode With Your iPhone 11 Volume Button

How to Take Burst Photos on iPhone 11 or 11 Pro

1. Open the **Camera app** on your iPhone.
2. Make sure you are in the 'PHOTO' tab. **Press on the camera shutter button and immediately drag it to the left.** If you are shooting in landscape mode, drag the shutter button down.

The number in the middle of the shutter button indicates how many pictures have been clicked.
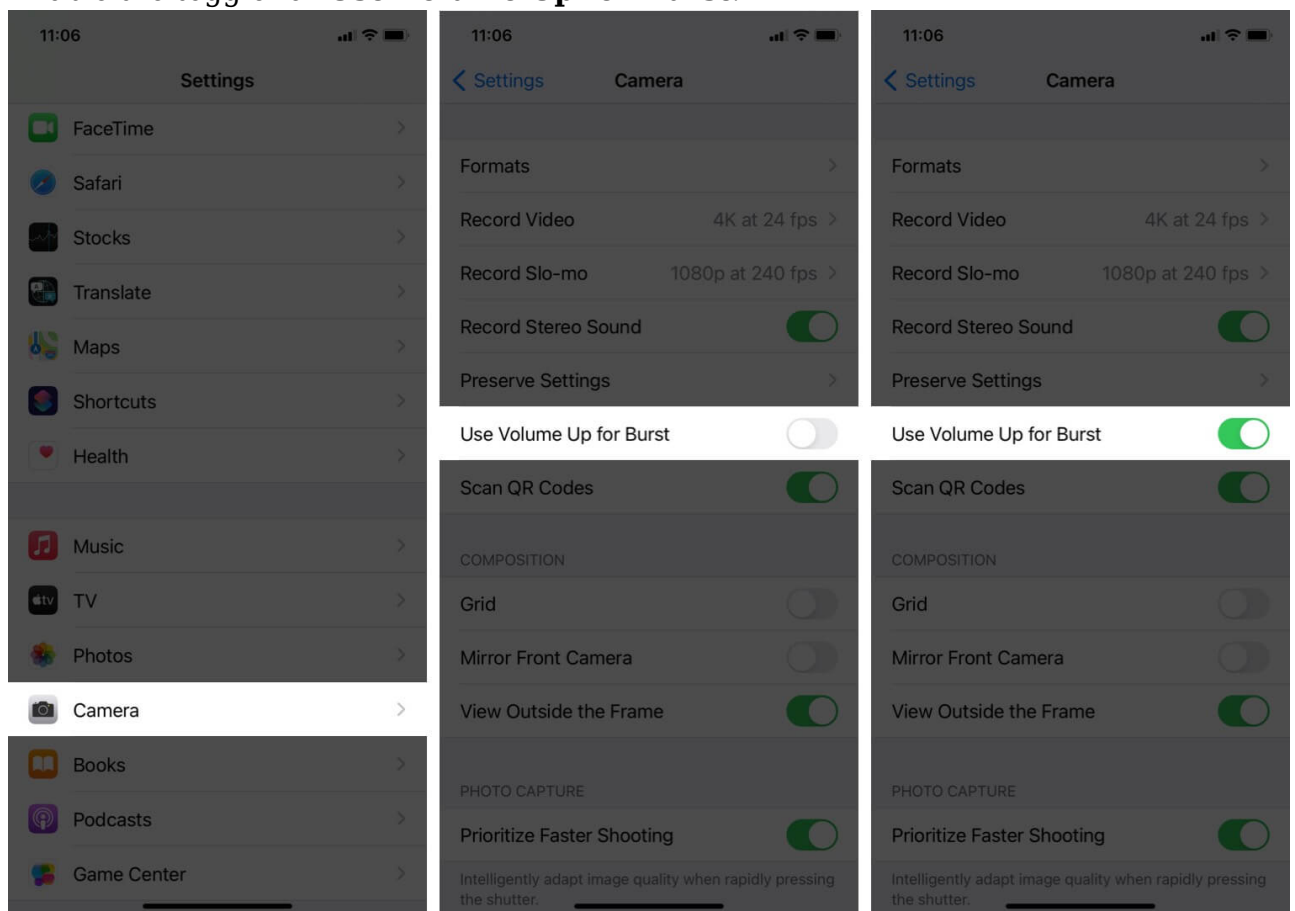

To stop clicking, release the shutter button.

How to Use Burst Mode With Your iPhone 11 Volume

Button

With iOS 14, a new option lets you use the volume up button for burst photos on iPhone 11 series. Let us see how.

1. Open the **Settings** app, scroll down and tap on **Camera**.
2. Enable the toggle for **Use Volume Up for Burst**.

3. Launch the **Camera app** and press & hold the volume up button to take burst photos.

To stop clicking, release the hold from the volume button.

Note: On iPhone 11 series, it must be the volume up button. If you press and hold the volume down switch, it activates QuickTake.

Extra Info: You can press the volume up or down button on connected EarPods (and some other compatible wired earphones) to click a photo. But if you press and hold the button, it does **not** shoot burst photos.

Signing Off

These are the two ways to take burst photos on iPhone 11, 11 Pro, and 11 Pro Max. It is excellent that Apple improvised and allowed volume button support in iOS 14. In my opinion, it is a tad more effortless and sure-shot than pressing the shutter button and dragging it to the left.
