You're freezing cold and want to send the following iMessage to a family member: "When did we move to Antarctica? Drop the temp a few °s!"

But... How do you insert a degree $^{\circ}$ symbol on your Mac? In this post, we'll show you a few ways to do just that.

How to insert a degree (°) symbol on Mac using the Keyboard shortcut

• Shift + Option + 8: This shortcut brings the degree symbol on your field like 95°.

There are 2 other shortcuts that add a degree-like sign to the text but are in fact used for other purposes.

- **Option + K:** This one inserts a small ring 95° It's used for typing the Ring above a diacritic.
- **Option + 0 (ZERO):** An option to write a sign 95^o It's the Masculine Ordinal Indicator used in written languages.

To end your confusion, we've listed the actual and in-depth <u>meaning behind each sign</u> that we found using the built-in text-to-speech engine on Mac.

How to type degree symbol on Mac using Emoji Keyboard

The Emoji and Symbols keyboard on your Mac is home to numerous characters and signs. To access it, press **Ctrl + Command + Space**. The keyboard will open right away.

If you want, you can also access it from the top menu bar.

- 1. Click **Edit** at the top of the screen.
- 2. Select Emoji & Symbols.
