

Stock trading has become an integral part of our lives. Whether you're trading stocks for a side income or are venturing into the industry full-time, constant monitoring of your stocks is a necessity. Thankfully, Apple has included a Stocks app on iPhones and has updated the app with the release of iOS 16. So, I'm going to give you detailed information on how you can manage multiple watchlists in Stocks on iPhone.

Before we get into the details, let me just tell you the Stocks app can be slightly tricky to navigate if you're a beginner. We're going to take a look at the basics of the Stocks app first.

Watchlists in iOS Stocks app - Create, rename, reorder

or delete

The Stocks app on iPhone lets you create a Watchlist, in which you can keep a tab on the various stocks that you've invested in. Even if you haven't invested in any stock but want to stay informed of stock prices, the Watchlist feature can be quite handy.

With this app, you can check individual stocks and their exchanges. Apart from this, it's relatively easy to check other aspects such as openings, P/E, news, graphs charting the price changes, and the various highs or low. So, let's dig deeper and learn more about how to check stocks on your iPhone!

Creating a stock watchlist on iPhone

1. Open the **Stocks** app on your iPhone.
2. Tap on the **My Symbols** option at the top half of the screen.
3. From the drop-down menu, select the **New Watchlist** option.
4. You'll have to give the Watchlist a name. Type in the **name** of your choice.
5. Select the **Save** option once you're done naming your Watchlist.

To switch between multiple Watchlists, you can select the My Symbols option and select the Watchlist of your choice. You could also tap on the name of the current Watchlist that you're viewing and then select the Watchlist you want to view.

Add symbols to the Stocks watchlist

Symbols on the watchlist will help track the performance of the companies or indexes you're keeping tabs on. Here's how you can add symbols to your watchlist:

1. Open the **Stocks** app on your iPhone.
2. In the **Search bar**, enter the name of the required Symbol, fund, company, or index.
3. Once you've found the Symbol that you're looking for, tap on the **Plus sign** (+) next to it. Then select **Done**.

You can also add a Symbol in one Watchlist to another. To do this, find the Symbol you want

to add and swipe left on it. Tap the three horizontal lines icon, and select the Watchlist you want to add the Symbol to. After this, click on Done.

Remove symbols from the watchlist

Once you're done with a particular Symbol on your Watchlist, removing it is fairly easy. All you need to do is find the Symbol you no longer need and select the **minus** (-) sign. The **Trash** option should come up, and you can select it to remove the Symbol.

If you've created a Watchlist that contains a Symbol you no longer need, you can remove it with the steps shown above. However, that same Symbol will remain in the default Watchlist of My Symbols.

Rename, reorder or delete stock watchlists on iPhone

Whether you want to reorder your Watchlist, rename, or delete it entirely, the steps for all three are shown below:

- **To delete your Watchlist:** Go to the **Manage Watchlists** option. Tap on the **Minus** sign (-) next to the Watchlist, select the **Trash** option, and then tap on **Delete**.

- **To reorder your Watchlist:** Tap and hold the **three horizontal lines** option, and then **drag** your current Watchlist to its new position.

- **To rename your Watchlist:** Select the **Pen** icon, type in your Watchlist's new name, and then select the **Save** option.

View stock watchlists across Apple devices

Sometimes, you may be using different Apple devices simultaneously. For example, you may have created and managed your Stocks Watchlist completely on your iPad. However, you now want to check your Watchlist on the iPhone. This is possible as well.

Thanks to iCloud, your iPhone, iPad, Mac, and even the iPod Touch can all seamlessly sync your Watchlists. Just ensure that you're logged into these devices with the same Apple ID.

- **iPhone, iPad, iPod Touch:** If you're using any of these three devices, you'll have to go to the **Settings** app. From there, select your name. Navigate to the **iCloud** option and tap on it. Choose the **Show All** option, and then switch on the relevant Stocks button.
- **Macs with macOS 10.14 or older:** Tap on the **Apple** logo and go to **System Preferences**. From there, navigate to the **Apple ID** segment. Select it, and then tap

on the **iCloud** option. Find the **Stocks** option and switch it on.

- **Mac with macOS 10.15 or newer:** Choose the **Apple menu** and select the **System Preferences** segment. Find the **iCloud** option, tap on it, and navigate to the **Stocks** option. Switch it on.

How to add or remove stocks from the watchlist on iPhone

Now that you're aware of the basics of handling your watchlist on the Stocks app, it's time to move on to slightly more challenging aspects. Of course, to maintain your Watchlist, you'll have to periodically add, remove, or rearrange stocks based on your requirements. Let's take a look at the steps for each of them, turn by turn.

Adding stocks to watchlist

1. Open the **Stocks** app on your iPhone.
2. Select the **Watchlist** that you want to add a stock to.
3. In the top half of the screen, you'll find the **Search** bar.
4. Type in the **name** of the stock that you want to add to the **Current watchlist**.
5. Below the Search bar, you'll find multiple stocks that pertain to the name you've typed.
6. Select the **plus sign** (+) next to the stock you want to add.
7. Select the **Done** option at the top right corner of the screen.

Removing stocks from a watchlist

1. Launch the **Stocks** app on your iPhone.
2. Select the **Watchlist** from which you want to remove a particular stock.
3. After opening the Watchlist, select the **three dots** option at the top right corner.
4. From the drop-down menu, select the **Edit Watchlist** option.
5. Navigate to the Stock that you want to remove from the Watchlist.
6. Next to the stock listing, you'll find a **minus sign** icon (-). Tap on it. A list of options should now appear next to the stock listing on the right side of the screen.
7. This list of options should also include a **Trash** icon. Tap on it. The stock will be removed from the Watchlist.
8. Select **Done** from the top right corner of the screen.

Reordering stocks

You can also reorder and rearrange the stocks based on their priority levels. To do this, check out the steps below:

1. After the watchlist is opened, tap on the **three dots** icon at the top right corner of the screen.
2. Select the **Edit Watchlist** option from the drop-down menu.
3. Next to each of the stocks, you'll notice a **three horizontal line** icon.
4. Tap and hold the horizontal line icon next to the stock you want to rearrange. You can move the stock up or down based on your preference.
5. Do this for all the stock listings you want to rearrange.
6. Choose the **Done** option at the top right corner of the screen after you've finished rearranging the list.

How to check stocks on iPhone

You can check your stocks on your iPhone in a couple of ways. The first way is through Siri. All you need to do is open Siri and say something along the lines of “how is the market doing today?” or “how are [insert company name] stocks doing today?” Upon saying this, Siri will open the Stocks app and show you the relevant details.

The other way to check stocks is through the app itself. Here’s how you do it:

1. Launch the **Stocks** app on your iPhone.
2. **Tap** on a particular stock listing to check more detailed information on that particular stock.
3. You can search for a specific stock through the **Search** bar on the Stocks app. Type in a ticker symbol, company name, index, or fund name.
4. Once the relevant results pop up, tap on the **ticker symbol** beside the stock for more information.

View stock trends

Since stock values are dynamic and keep changing daily, you can check the trends to have a better idea about the stock’s performance in the market. Below, you’ll find the steps to view

the stock trends:

1. Open the **Stocks** app on your iPhone.
2. **Search** for the particular stock whose trend you want to see.
3. When you find the stock listed on the app, you can tap on it.
4. A window will show an interactive graph of the stock's performance.
5. Above the graph, you'll find various **timeline options**. These start on a particular day and go on for an entire year. Choose your timeline option to check the stock trends.

Check stock exchanges using Siri

Apart from asking Siri to check on individual stocks, you can also seek Siri's help to check stock exchanges. These include the likes of NASDAQ or Nikkei.

- State "*Hey Siri*" to your iPhone. You can also press and hold the **Unlock** button on the side of your iPhone for a few seconds. After this, Siri will be activated.
- You can then ask Siri directly about stock exchanges. Use phrases such as "*how did Nikkei close today?*" or "*can you show me information on NASDAQ?*". Upon hearing this, Siri will pull up all the relevant information on your Stocks app based on your requirements.
- For more information, select the widget that pops up when Siri gives you the details on the stock exchanges.

Summing up

So, I hope you have now gained a better understanding of how to manage multiple watchlists in Stocks on iPhone. The Stocks app is a great addition to the iPhone and makes it much more convenient for people to check in on their stock options. If you think that I've missed out on any key points here, let me know about them in the comments section below!
